

# CR 5089 (Assigned/Open)

- Include files (pre-compiler feature)
- TT disagree and makes a counter proposal
  - ▶ 

```
module M {  
    import from A {  
        import all;  
    }  
    ...  
}
```
  - ▶ Semantics: Everything imported by A is also imported in M, transitive, default is private
  - ▶ Syntax is similar to other imports, e.g. 'template all'
  - ▶ Single 'import' statements can not be imported, as they are not named, i.e. only 'import all' is allowed
  - ▶ No additional key words will be introduced
