

# SOL005 - NS Lifecycle Management Notification interface

## Overview

SOL005 - NS Lifecycle Management Notification interface

### IMPORTANT

Please note that this file might be not aligned to the current version of the ETSI Group Specification it refers to. In case of discrepancies the published ETSI Group Specification takes precedence.

In clause 4.3.2 of ETSI GS NFV-SOL 002 v2.4.1, an attribute-based filtering mechanism is defined. This mechanism is currently not included in the corresponding OpenAPI design for this GS version. Changes to the attribute-based filtering mechanism are being considered in v2.5.1 of this GS for inclusion in the corresponding future ETSI NFV OpenAPI design. Please report bugs to [https://forge.etsi.org/bugzilla/buglist.cgi?component=Nfv-Openapis&list\\_id=61&product=NFV&resolution=](https://forge.etsi.org/bugzilla/buglist.cgi?component=Nfv-Openapis&list_id=61&product=NFV&resolution=)

## Paths

### Notify about NS lifecycle change

POST /URI\_is\_provided\_by\_the\_client\_when\_creating\_the\_subscription-  
NsIdentifierCreationNotification

#### Description

The POST method delivers a notification from the server to the client. This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the Tables 6.4.18.3.1-1 and 6.4.18.3.1-2.

#### Parameters

Type	Name	Description	Schema
Header	<b>Accept</b> <i>required</i>	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	<b>Authorization</b> <i>optional</i>	The authorization token for the request. Reference: IETF RFC 7235	string
Header	<b>Content-Type</b> <i>required</i>	The MIME type of the body of the request. Reference: IETF RFC 7231	string
Header	<b>Version</b> <i>required</i>	Version of the API requested to use when responding to this request.	string
Body	<b>NsIdentifierC reationNotific ation</b> <i>required</i>	A notification about the creation of a NS identifier and the related NS instance resource.	<a href="#">NsIdentifierCreation Notification</a>

#### NsIdentifierCreationNotification

Name	Schema
<b>NsIdentifierCreationNotification</b> <i>optional</i>	<a href="#">NsIdentifierCreationNotification</a>

### NsIdentifierCreationNotification

Name	Description	Schema
<b>_links</b> <i>optional</i>	This type represents the links to resources that a notification can contain.	<a href="#">_links</a>
<b>notificationType</b> <i>optional</i>	Discriminator for the different notification types. Shall be set to "NsIdentifierDeletionNotification" for this notification type.	string
<b>nsInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>subscriptionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>timestamp</b> <i>optional</i>	Date-time stamp. Representation: String formatted according to IETF RFC 3339.	string (date-time)

### links

Name	Description	Schema
<b>lcOpOcc</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">lcOpOcc</a>
<b>nsInstance</b> <i>required</i>	This type represents a link to a resource.	<a href="#">nsInstance</a>
<b>subscription</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">subscription</a>

### lcOpOcc

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

## nsInstance

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

## subscription

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

## Responses

HTTP Code	Description	Schema
204	204 No Content The notification was delivered successfully. <b>Headers :</b> <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token. <b>Version</b> (string) : Version of the API used in the response.	No Content
400	Bad Request Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. <b>Headers :</b> <b>Content-Type</b> (string) : The MIME type of the body of the response. <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	<a href="#">Response 400</a>

HTTP Code	Description	Schema
401	<p>Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	<a href="#">Response 401</a>
403	<p>Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 403</a>
404	<p>Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 404</a>
405	<p>Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 405</a>

HTTP Code	Description	Schema
406	<p>Not Acceptable If the Accept HTTP header does not contain at least one name of a content type that is acceptable to the API producer, the API producer shall respond with this response code. The ProblemDetails structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 406</a>
409	<p>409 CONFLICT</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.  <b>Version</b> (string) : Version of the API used in the response.</p>	<a href="#">Response 409</a>
416	<p>Requested Range Not Satisfiable This code is returned if the requested byte range in the Range HTTP header is not present in the requested resource.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 416</a>
500	<p>Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond with this response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 500</a>
503	<p>Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 503</a>

## Response 400

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 401

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer

Name	Description	Schema
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 403

Name	Description	Schema
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string

Name	Description	Schema
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

#### Response 404

Name	Description	Schema
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

#### Response 405

Name	Description	Schema
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 406

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 409

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string

Name	Description	Schema
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 416

Name	Description	Schema
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)

It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 503

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer

Name	Description	Schema
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

## Notify about NS lifecycle change

```
POST /URI_is_provided_by_the_client_when_creating_the_subscription-
NsIdentifierDeletionNotification
```

### Description

The POST method delivers a notification from the server to the client. This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the Tables 6.4.18.3.1-1 and 6.4.18.3.1-2.

### Parameters

Type	Name	Description	Schema
<b>Header</b>	<b>Accept</b> <i>required</i>	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
<b>Header</b>	<b>Authorization</b> <i>optional</i>	The authorization token for the request. Reference: IETF RFC 7235	string
<b>Header</b>	<b>Content-Type</b> <i>required</i>	The MIME type of the body of the request. Reference: IETF RFC 7231	string
<b>Header</b>	<b>Version</b> <i>required</i>	Version of the API requested to use when responding to this request.	string

Type	Name	Description	Schema
Body	<b>NsIdentifierDeletionNotification</b> <i>required</i>	A notification about the deletion of a NS identifier and the related NS instance resource.	<a href="#">NsIdentifierDeletionNotification</a>

### NsIdentifierDeletionNotification

Name	Schema
<b>NsIdentifierDeletionNotification</b> <i>optional</i>	<a href="#">NsIdentifierDeletionNotification</a>

### NsIdentifierDeletionNotification

Name	Description	Schema
<b>_links</b> <i>optional</i>	This type represents the links to resources that a notification can contain.	<a href="#">_links</a>
<b>notificationType</b> <i>optional</i>	Discriminator for the different notification types. Shall be set to "NsIdentifierDeletionNotification" for this notification type.	string
<b>nsInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>subscriptionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>timestamp</b> <i>optional</i>	Date-time stamp. Representation: String formatted according to IETF RFC 3339.	string (date-time)

### \_links

Name	Description	Schema
<b>lcOpOcc</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">lcOpOcc</a>
<b>nsInstance</b> <i>required</i>	This type represents a link to a resource.	<a href="#">nsInstance</a>

Name	Description	Schema
<b>subscription</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">subscription</a>

### lcOpOcc

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

### nsInstance

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

### subscription

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

## Responses

HTTP Code	Description	Schema
<b>204</b>	<p>204 No Content The notification was delivered successfully.</p> <p><b>Headers :</b></p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p> <p><b>Version</b> (string) : Version of the API used in the response.</p>	No Content

HTTP Code	Description	Schema
400	<p>Bad Request Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 400
401	<p>Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 401
403	<p>Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 403
404	<p>Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 404

HTTP Code	Description	Schema
405	<p>Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 405</a>
406	<p>Not Acceptable If the Accept HTTP header does not contain at least one name of a content type that is acceptable to the API producer, the API producer shall respond with this response code. The ProblemDetails structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 406</a>
409	<p>409 CONFLICT</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.  <b>Version</b> (string) : Version of the API used in the response.</p>	<a href="#">Response 409</a>
416	<p>Requested Range Not Satisfiable This code is returned if the requested byte range in the Range HTTP header is not present in the requested resource.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 416</a>
500	<p>Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond with this response code. ## Test the notification endpoint.

```
GET /URI_is_provided_by_the_client_when_creating_the_subscription-
NsIdentifierDeletionNotification
```

### Description

Query NS Instances. The GET method queries information about multiple NS instances. This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the Tables 6.4.2.3.2-1 and 6.4.2.3.2-2.

### Parameters

Type	Name	Description	Schema
<b>Header</b>	<b>Accept</b> <i>required</i>	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string

Type	Name	Description	Schema
Header	<b>Authorization</b> <i>optional</i>	The authorization token for the request. Reference: IETF RFC 7235	string
Header	<b>Version</b> <i>required</i>	Version of the API requested to use when responding to this request.	string

## Responses

HTTP Code	Description	Schema
204	<p>204 No Content The notification endpoint was tested successfully. The response body shall be empty.</p> <p><b>Headers :</b></p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p> <p><b>Version</b> (string) : Version of the API used in the response.</p>	No Content
400	<p>Bad Request Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 400
401	<p>Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided.</p> <p><b>Headers :</b></p> <p><b>Content-Type</b> (string) : The MIME type of the body of the response.</p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 401

HTTP Code	Description	Schema
403	<p>Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 403
404	<p>Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 404
405	<p>Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 405
406	<p>Not Acceptable If the Accept HTTP header does not contain at least one name of a content type that is acceptable to the API producer, the API producer shall respond with this response code. The ProblemDetails structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 406
409	<p>409 CONFLICT</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.  <b>Version</b> (string) : Version of the API used in the response.</p>	Response 409

HTTP Code	Description	Schema
416	<p>Requested Range Not Satisfiable This code is returned if the requested byte range in the Range HTTP header is not present in the requested resource.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 416</a>
500	<p>Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond with this response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 500</a>
503	<p>Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 503</a>

### Response 503

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string

Name	Description	Schema
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

## Notify about NS lifecycle change

POST /URI\_is\_provided\_by\_the\_client\_when\_creating\_the\_subscription-  
NsLcmOperationOccurrenceNotification

### Description

The POST method delivers a notification from the server to the client. This method shall support the URI query parameters, request and response data structures, and response codes, as specified in the Tables 6.4.18.3.1-1 and 6.4.18.3.1-2.

### Parameters

Type	Name	Description	Schema
<b>Header</b>	<b>Accept</b> <i>required</i>	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
<b>Header</b>	<b>Authorization</b> <i>optional</i>	The authorization token for the request. Reference: IETF RFC 7235	string
<b>Header</b>	<b>Content-Type</b> <i>required</i>	The MIME type of the body of the request. Reference: IETF RFC 7231	string
<b>Header</b>	<b>Version</b> <i>required</i>	Version of the API requested to use when responding to this request.	string
<b>Body</b>	<b>NsLcmOperationOccurrenceNotification</b> <i>required</i>	A notification about lifecycle changes triggered by a NS LCM. operation occurrence.	<a href="#">NsLcmOperationOccurrenceNotification</a>

### NsLcmOperationOccurrenceNotification

Name	Schema
<b>NsLcmOperationOccurrenceNotification</b> <i>optional</i>	<a href="#">NsLcmOperationOccurrenceNotification</a>

### NsLcmOperationOccurrenceNotification

Name	Description	Schema
<b>_links</b> <i>optional</i>	This type represents the links to resources that a notification can contain.	<a href="#">_links</a>
<b>affectedNs</b> <i>optional</i>	Information about the SAP instances that were affected during the lifecycle operation. See note.	< <a href="#">affectedNs</a> > array
<b>affectedPnf</b> <i>optional</i>	This type provides information about added, deleted and modified PNFs. It shall comply with the provisions in Table 6.5.3.3-1.	<a href="#">affectedPnf</a>
<b>affectedSap</b> <i>optional</i>	The enumeration NsLcmOpType represents those lifecycle operations that trigger a NS lifecycle management operation occurrence notification. Value   Description ———— ———— INSTANTIATE   Represents the "Instantiate NS" LCM operation. SCALE   Represents the "Scale NS" LCM operation. UPDATE   Represents the "Update NS" LCM operation. TERMINATE   Represents the "Terminate NS" LCM operation. HEAL   Represents the "Heal NS" LCM operation.	enum (INSTANTIATE, SCALE, UPDATE, TERMINATE, HEAL)
<b>affectedVl</b> <i>optional</i>	Information about the VL instances that were affected during the lifecycle operation.	< <a href="#">affectedVl</a> > array
<b>affectedVnf</b> <i>optional</i>	This type provides information about added, deleted and modified VNFs. It shall comply with the provisions in Table 6.5.3.2-1.	<a href="#">affectedVnf</a>
<b>affectedVnffg</b> <i>optional</i>	Information about the VNFFG instances that were affected during the lifecycle operation.	< <a href="#">affectedVnffg</a> > array

Name	Description	Schema
<b>error</b> <i>optional</i>	The definition of the general "ProblemDetails" data structure from IETF RFC 7807 [19] is reproduced in this structure. Compared to the general framework defined in IETF RFC 7807 [19], the "status" and "detail" attributes are mandated to be included by the present document, to ensure that the response contains additional textual information about an error. IETF RFC 7807 [19] foresees extensibility of the "ProblemDetails" type. It is possible that particular APIs in the present document, or particular implementations, define extensions to define additional attributes that provide more information about the error. The description column only provides some explanation of the meaning to Facilitate understanding of the design. For a full description, see IETF RFC 7807 [19].	error
<b>id</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>isAutomaticInvocation</b> <i>optional</i>	Set to true if this NS LCM operation occurrence has been automatically triggered by the NFVO. This occurs in case of auto-scaling, auto-healing and when a nested NS is modified as a result of an operation on its composite NS. Set to false otherwise.	boolean
<b>notificationStatus</b> <i>optional</i>	Indicates whether this notification reports about the start of a NS lifecycle operation or the result of a NS lifecycle operation. Permitted values: - START: Informs about the start of the NS LCM operation occurrence. - RESULT: Informs about the final or intermediate result of the NS LCM operation occurrence.	enum (START, RESULT)
<b>notificationType</b> <i>optional</i>	Discriminator for the different notification types. Shall be set to "NsLcmOperationOccurrenceNotification" for this notification type.	string
<b>nsInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>nsLcmOpOccId</b> <i>required</i>	An identifier with the intention of being globally unique.	string

Name	Description	Schema
<b>operation</b> <i>optional</i>	The enumeration NsLcmOpType represents those lifecycle operations that trigger a NS lifecycle management operation occurrence notification. Value   Description —— ——— INSTANTIATE   Represents the "Instantiate NS" LCM operation. SCALE   Represents the "Scale NS" LCM operation. UPDATE   Represents the "Update NS" LCM operation. TERMINATE   Represents the "Terminate NS" LCM operation. HEAL   Represents the "Heal NS" LCM operation.	enum (INSTANTIATE, SCALE, UPDATE, TERMINATE, HEAL)
<b>operationState</b> <i>optional</i>	The enumeration NsLcmOperationStateType shall comply with the provisions defined in Table 6.5.4.4-1. Value   Description —— ——— PROCESSING   The LCM operation is currently in execution. COMPLETED   The LCM operation has been completed successfully. PARTIALLY_COMPLETED   The LCM operation has been partially completed with acceptable errors. FAILED_TEMP   The LCM operation has failed and execution has stopped, but the execution of the operation is not considered to be closed. FAILED   The LCM operation has failed and it cannot be retried or rolled back, as it is determined that such action won't succeed. ROLLING_BACK   The LCM operation is currently being rolled back. ROLLED_BACK   The LCM operation has been successfully rolled back, i.e. The state of the VNF prior to the original operation invocation has been restored as closely as possible.	enum (PROCESSING, COMPLETED, FAILED_TEMP, FAILED, ROLLING_BACK, ROLLED_BACK)
<b>subscriptionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>timestamp</b> <i>optional</i>	Date-time stamp. Representation: String formatted according to IETF RFC 3339.	string (date-time)

### links

Name	Description	Schema
<b>lcOpOcc</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">lcOpOcc</a>
<b>nsInstance</b> <i>required</i>	This type represents a link to a resource.	<a href="#">nsInstance</a>

Name	Description	Schema
<b>subscription</b> <i>optional</i>	This type represents a link to a resource.	<a href="#">subscription</a>

### lcOpOcc

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

### nsInstance

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

### subscription

Name	Description	Schema
<b>href</b> <i>required</i>	URI of the referenced resource.	string (url)

### affectedNs

Name	Description	Schema
<b>changeResult</b> <i>optional</i>	Signals the result of change identified by the "changeType" attribute. Permitted values: - COMPLETED - ROLLED_BACK - FAILED	enum (COMPLETED, ROLLED_BACK, FAILED)
<b>changeType</b> <i>optional</i>	Signals the type of lifecycle change. Permitted values: - ADD - REMOVE - MODIFY	enum (ADD, REMOVE, MODIFY)
<b>sapInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>sapName</b> <i>optional</i>	Human readable name for the SAP.	string
<b>sapdId</b> <i>required</i>	An identifier with the intention of being globally unique.	string

### affectedPnf

Name	Description	Schema
<b>changeResult</b> <i>optional</i>	Signals the result of change identified by the "changeType" attribute. Permitted values: - COMPLETED - ROLLED_BACK - FAILED	enum (COMPLETED, ROLLED_BACK, FAILED)
<b>changeType</b> <i>optional</i>	Signals the type of change. Permitted values: - ADD - REMOVE - MODIFY	enum (ADD, REMOVE, MODIFY)
<b>cpInstanceId</b> <i>required</i>	Identifier of the CP in the scope of the PNF.	< string > array
<b>pnfId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>pnfName</b> <i>optional</i>	Name of the PNF.	string
<b>pnfProfileId</b> <i>required</i>	An identifier that is unique within a NS descriptor. Representation: string of variable length.	string
<b>pnfdId</b> <i>required</i>	An identifier that is unique within a NS descriptor. Representation: string of variable length.	string

#### affectedVl

Name	Description	Schema
<b>changeType</b> <i>required</i>	Signals the type of change. Permitted values: * ADDED * REMOVED * MODIFIED * TEMPORARY * LINK_PORT_ADDED * LINK_PORT_REMOVED For a temporary resource, an AffectedVirtualLink structure exists as long as the temporary resource exists.	enum (ADDED, REMOVED, MODIFIED, TEMPORARY, LINK_PORT_ADDED, LINK_PORT_REMOVED)
<b>id</b> <i>required</i>	An identifier that is unique for the respective type within a VNF instance, but may not be globally unique.	string
<b>metadata</b> <i>optional</i>	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	object

Name	Description	Schema
<b>networkResource</b> <i>required</i>	This type represents the information that allows addressing a virtualised resource that is used by a VNF instance. Information about the resource is available from the VIM.	<a href="#">networkResource</a>
<b>virtualLinkId</b> <i>required</i>	Identifier of the VNF Virtual Link Descriptor (VLD) in the VNFD.	string

### networkResource

Name	Description	Schema
<b>resourceId</b> <i>required</i>	An identifier maintained by the VIM or other resource provider. It is expected to be unique within the VIM instance.	string
<b>resourceProviderId</b> <i>optional</i>	An identifier with the intention of being globally unique.	string
<b>vimConnectionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>vimLevelResourceType</b> <i>optional</i>	Type of the resource in the scope of the VIM or the resource provider.	string

### affectedVnf

Name	Description	Schema
<b>changeResult</b> <i>optional</i>	Signals the result of change identified by the "changeType" attribute. Permitted values: - COMPLETED - ROLLED_BACK - FAILED	enum (COMPLETED, ROLLED_BACK, FAILED)

Name	Description	Schema
<b>changeType</b> <i>optional</i>	Signals the type of change Permitted values: - ADD - REMOVE - INSTANTIATE - TERMINATE - SCALE - CHANGE_FLAVOUR - HEAL - OPERATE - MODIFY_INFORMATION - CHANGE_EXTERNAL_VNF_CONNECTIVITY	enum (ADD, REMOVE, INSTANTIATE, TERMINATE, SCALE, CHANGE_FLAVOUR, HEAL, OPERATE, MODIFY_INFORMATION, CHANGE_EXTERNAL_VNF_CONNECTIVITY)
<b>changedInfo</b> <i>optional</i>	Information about the changed VNF instance information, including VNF configurable properties,if applicable. When the "changedInfo" attribute is present, either the "changedVnfInfo" attribute or the "changedExtConnectivity" attribute or both shall be present.	<a href="#">changedInfo</a>
<b>vnfInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>vnfName</b> <i>optional</i>	Name of the VNF Instance.	string
<b>vnfProfileId</b> <i>required</i>	An identifier that is unique within a NS descriptor. Representation: string of variable length.	string
<b>vnfdId</b> <i>required</i>	An identifier with the intention of being globally unique.	string

### changedInfo

Name	Description	Schema
<b>changedExtConnectivity</b> <i>optional</i>		<a href="#">changedExtConnectivity</a>

Name	Description	Schema
<b>changedVnfInfo</b> <i>optional</i>	This type represents the information that is requested to be modified for a VNF instance. The information to be modified shall comply with the associated NSD. EXAMPLE. The vnfPkgId attribute value for a particular VNF instance can only be updated with a value that matches the identifier value of a VNF package whose vnfId is present in the associated profile of the NSD.	<a href="#">changedVnfInfo</a>

### changedExtConnectivity

Name	Description	Schema
<b>extLinkPorts</b> <i>optional</i>	Link ports of this VL.	< <a href="#">extLinkPorts</a> > array
<b>id</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>resourceHandle</b> <i>required</i>	This type represents the information that allows addressing a virtualised resource that is used by a VNF instance. Information about the resource is available from the VIM.	<a href="#">resourceHandle</a>

### extLinkPorts

Name	Description	Schema
<b>cpInstanceId</b> <i>optional</i>	An identifier that is unique for the respective type within a VNF instance, but may not be globally unique.	string
<b>id</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>resourceHandle</b> <i>required</i>	This type represents the information that allows addressing a virtualised resource that is used by a VNF instance. Information about the resource is available from the VIM.	<a href="#">resourceHandle</a>

### resourceHandle

Name	Description	Schema
<b>resourceId</b> <i>required</i>	An identifier maintained by the VIM or other resource provider. It is expected to be unique within the VIM instance.	string

Name	Description	Schema
<b>resourceProviderId</b> <i>optional</i>	An identifier with the intention of being globally unique.	string
<b>vimConnectionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>vimLevelResourceType</b> <i>optional</i>	Type of the resource in the scope of the VIM or the resource provider.	string

### resourceHandle

Name	Description	Schema
<b>resourceId</b> <i>required</i>	An identifier maintained by the VIM or other resource provider. It is expected to be unique within the VIM instance.	string
<b>resourceProviderId</b> <i>optional</i>	An identifier with the intention of being globally unique.	string
<b>vimConnectionId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>vimLevelResourceType</b> <i>optional</i>	Type of the resource in the scope of the VIM or the resource provider.	string

### changedVnfInfo

Name	Description	Schema
<b>Extensions</b> <i>optional</i>	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	object

Name	Description	Schema
<b>Metadata</b> <i>optional</i>	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	object
<b>vnfConfigurableProperties</b> <i>optional</i>	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	object
<b>vnfInstanceDescription</b> <i>optional</i>	New value of the "vnfInstanceDescription" attribute in "VnfInstance", or "null" to remove the attribute.	string
<b>vnfInstanceId</b> <i>required</i>	An identifier with the intention of being globally unique.	string
<b>vnfInstanceName</b> <i>optional</i>	New value of the "vnfInstanceName" attribute in "VnfInstance", or "null" to remove the attribute.	string
<b>vnfPkgId</b> <i>optional</i>	An identifier with the intention of being globally unique.	string

### affectedVnffg

Name	Description	Schema
<b>changeResult</b> <i>optional</i>	Signals the result of change identified by the "changeType" attribute. Permitted values: - COMPLETED - ROLLED_BACK - FAILED	enum (COMPLETED, ROLLED_BACK, FAILED)
<b>changeType</b> <i>optional</i>	Signals the type of change. Permitted values: - ADD - DELETE - MODIFY	enum (ADD, DELETE, MODIFY)
<b>vnffgInstanceId</b> <i>required</i>	An identifier that is unique with respect to a NS. Representation: string of variable length.	string
<b>vnffgdId</b> <i>required</i>	An identifier that is unique within a NS descriptor. Representation: string of variable length.	string

### error

Name	Description	Schema
<b>detail</b> <i>required</i>	A human-readable explanation specific to this occurrence of the problem.	string
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

## Responses

HTTP Code	Description	Schema
<b>204</b>	<p>204 No Content The notification was delivered successfully.</p> <p><b>Headers :</b></p> <p><b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p> <p><b>Version</b> (string) : Version of the API used in the response.</p>	No Content

HTTP Code	Description	Schema
400	<p>Bad Request Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 400
401	<p>Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.</p>	Response 401
403	<p>Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 403
404	<p>Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 404

HTTP Code	Description	Schema
405	<p>Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 405</a>
406	<p>Not Acceptable If the Accept HTTP header does not contain at least one name of a content type that is acceptable to the API producer, the API producer shall respond with this response code. The ProblemDetails structure may be omitted in that case.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 406</a>
409	<p>409 CONFLICT</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.  <b>WWW-Authenticate</b> (string) : Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.  <b>Version</b> (string) : Version of the API used in the response.</p>	<a href="#">Response 409</a>
416	<p>Requested Range Not Satisfiable This code is returned if the requested byte range in the Range HTTP header is not present in the requested resource.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 416</a>
500	<p>Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond with this response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	<a href="#">Response 500</a>

HTTP Code	Description	Schema
503	<p>Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted.</p> <p><b>Headers :</b>  <b>Content-Type</b> (string) : The MIME type of the body of the response.</p>	Response 503

### Response 400

<b>Name</b>	<b>Description</b>	<b>Schema</b>
<b>instance</b> <i>optional</i>	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
<b>status</b> <i>required</i>	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
<b>title</b> <i>optional</i>	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
<b>type</b> <i>optional</i>	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

### Response 409
