SOL005v020401p.pdf

Paths

Subscriptions

POST /subscriptions

Description

Subscribe. The POST method creates a new subscription. Creation of two subscription resources with the same callbackURI and the same filter can result in performance degradation and will provide duplicates of notifications to the VNFM, and might make sense only in very rare use cases. Consequently, the NFVO may either allow creating a subscription resource if another subscription resource with the same filter and callbackUri already exists (in which case it shall return the "201 Created" response code), or may decide to not create a duplicate subscription resource (in which case it shall return a "303 See Other" response code referencing the existing subscription resource with the same filter and callbackUri).

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Header	Content-Type required	The MIME type of the body of the request. Reference: IETF RFC 7231	string
Body	PkgmSubscrip tionRequest required	Representation of the created subscription resource. The HTTP response shall include a "Location" HTTP header that points to the created subscription resource.	_

PkgmSubscriptionRequest

Name	Description	Schema
authenticatio n optional		authentication
callbackUri required	String formatted according to IETF RFC 3986.	string

Name	Description	Schema
filter optional	This type represents a subscription filter related to notifications related to VNF package management. At a particular nesting level in the filter structure, the following applies: All attributes shall match in order for the filter to match (logical "and" between different filter attributes). If an attribute is an array, the attribute shall match if at least one of the values in the array matches (logical "or" between the values of one filter attribute).	filter

authentication

Name	Description	Schema
authType required	Defines the types of Authentication / Authorization which the API consumer is willing to accept when receiving a notification. Permitted values: * BASIC: In every HTTP request to the notification endpoint, use HTTP Basic authentication with the client credentials. * OAUTH2_CLIENT_CREDENTIALS: In every HTTP request to the notification endpoint, use an OAuth 2.0 Bearer token, obtained using the client credentials grant type. * TLS_CERT: Every HTTP request to the notification endpoint is sent over a mutually authenticated TLS session, i.e. not only the server is authenticated, but also the client is authenticated during the TLS tunnel setup.	EDENTIALS, TLS_CERT) > array
paramsBasic optional	Parameters for authentication/authorization using BASIC. Shall be present if authType is "BASIC" and the contained information has not been provisioned out of band. Shall be absent otherwise.	paramsBasic
paramsOauth 2ClientCreden tials optional	Parameters for authentication/authorization using OAUTH2_CLIENT_CREDENTIALS. Shall be present if authType is "OAUTH2_CLIENT_CREDENTIALS" and the contained information has not been provisioned out of band. Shall be absent otherwise.	paramsOauth2Client Credentials

paramsBasic

Name	Description	Schema
password optional	Password to be used in HTTP Basic authentication. Shall be present if it has not been provisioned out of band.	string

Name	Description	Schema
userName optional	Username to be used in HTTP Basic authentication. Shall be present if it has not been provisioned out of band.	string

params O auth 2 Client Credentials

Name	Description	Schema
clientId optional	Client identifier to be used in the access token request of the OAuth 2.0 client credentials grant type. Shall be present if it has not been provisioned out of band. The clientId and clientPassword passed in a subscription shall not be the same as the clientId and clientPassword that are used to obtain authorization for API requests. Client credentials may differ between subscriptions. The value of clientPassword should be generated by a random process.	string
clientPasswor d optional	Client password to be used in the access token request of the OAuth 2.0 client credentials grant type. Shall be present if it has not been provisioned out of band. The clientId and clientPassword passed in a subscription shall not be the same as the clientId and clientPassword that are used to obtain authorization for API requests. Client credentials may differ between subscriptions. The value of clientPassword should be generated by a random process.	
tokenEndpoin t optional	String formatted according to IETF RFC 3986.	string

filter

Name	Description	Schema
notificationTy pes optional	Match particular notification types. Permitted values: - VnfPackageOnboardingNotification - VnfPackageChangeNotification	enum (VnfPackageOnboar dingNotification, VnfPackageChangeN otification)
vnfProductsFr omProviders optional	If present, match VNF packages that contain VNF products from certain providers.	<pre> vnfProductsFromPr oviders > array</pre>

vnfProductsFromProviders

Name	Description	Schema
operationalSt ate optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< enum (ENABLED, DISABLED) > array
usageState optional	Match particular usage state of the on-boarded VNF package. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< enum (IN_USE, NOT_IN_USE) > array
vnfPkgId optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< string > array
vnfProducts optional	If present, match VNF packages that contain VNF products with certain product names, from one particular provider.	< vnfProducts > array
vnfProvider required	Name of the VNFprovider to match.	string
vnfdId optional	Match VNF packages with a VNFD identifier listed in the attribute.	< string > array

vnfProducts

Name	Description	Schema
versions optional	If present, match VNF packages that contain VNF products with certain versions and a certain product name, from one particular provider.	
vnfProductNa me required	Name of the VNF product to match.	string

versions

Name	Description	Schema
vnfSoftwareV ersion required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	
vnfdVersions optional	If present, match VNF packages that contain VNF products with certain VNFD versions, a certain software version and a certain product name, from one particular provider.	< string > array

HTTP Code	Description	Schema
201	Created Representation of the created subscription resource. The HTTP response shall include a "Location" HTTP header that points to the created subscription resource. Headers: Content-Type (string): The MIME type of the body of the response. Location (string (url)): The resource URI of the created VNF instance. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	< Response 201 > array
303	See Other A subscription with the same callbackURI and the same filter already exists and the policy of the VNFM is to not create redundant subscriptions. The HTTP response shall include a "Location" HTTP header that contains the resource URI of the existing subscription resource. The response body shall be empty.	No Content
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400

HTTP Code	Description	Schema
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406

HTTP Code	Description	Schema
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	

Name	Description	Schema
_links required	Links to resources related to this resource.	_links
callbackUri required	String formatted according to IETF RFC 3986.	string
filter optional	This type represents a subscription filter related to notifications related to VNF package management. At a particular nesting level in the filter structure, the following applies: All attributes shall match in order for the filter to match (logical "and" between different filter attributes). If an attribute is an array, the attribute shall match if at least one of the values in the array matches (logical "or" between the values of one filter attribute).	filter

Name	Description	Schema
id required	String formatted according to IETF RFC 3986.	string

_links

vnfPkgId optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< string > array
vnfProducts optional	If present, match VNF packages that contain VNF products with certain product names, from one particular provider.	< vnfProducts > array
vnfProvider required	Name of the VNFprovider to match.	string
vnfdId optional	Match VNF packages with a VNFD identifier listed in the attribute.	< string > array

vnfProducts

Name	Description	Schema
versions optional	If present, match VNF packages that contain VNF products with certain versions and a certain product name, from one particular provider.	< versions > array
vnfProductNa me required	Name of the VNF product to match.	string

versions

Name	Description	Schema
vnfSoftwareV ersion required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	
vnfdVersions optional	If present, match VNF packages that contain VNF products with certain VNFD versions, a certain software version and a certain product name, from one particular provider.	< string > array

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

Query Subscription Information

GET /subscriptions

Description

Query Subscription Information The GET method queries the list of active subscriptions of the functional block that invokes the method. It can be used e.g. for resynchronization after error situations.

Parameters

Type	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string

Туре	Name	Description	Schema
Query	filter optional	"Attribute-based filtering parameters according to clause 4.3.2. The NFVO shall support receiving filtering parameters as part of the URI query string. The OSS/BSS may supply filtering parameters. All attribute names that appear in the PkgmSubscription and in data types referenced from it shall be supported in attribute-based filtering parameters."	string

HTTP Code	Description	Schema
200	OK Active subscriptions of the functional block that invokes the method. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	< Response 200 > array
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400

HTTP Code	Description	Schema
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406

HTTP Code	Description	Schema
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

Name	Description	Schema

Name	Description	Schema
vnfPkgId optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< string > array
vnfProducts optional	If present, match VNF packages that contain VNF products with certain product names, from one particular provider.	< vnfProducts > array
vnfProvider required	Name of the VNFprovider to match.	string
vnfdId optional	Match VNF packages with a VNFD identifier listed in the attribute.	< string > array

vnfProducts

Name	Description	Schema
versions optional	If present, match VNF packages that contain VNF products with certain versions and a certain product name, from one particular provider.	< versions > array
vnfProductNa me required	Name of the VNF product to match.	string

versions

Name	Description	Schema
vnfSoftwareV ersion required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	
vnfdVersions optional	If present, match VNF packages that contain VNF products with certain VNFD versions, a certain software version and a certain product name, from one particular provider.	< string > array

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

Query Subscription Information

GET /subscriptions/{subscriptionId}

Description

Query Subscription Information The GET method reads an individual subscription.

Parameters

Type	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string

Туре	Name	Description	Schema
Path	subscriptionI d required	Identifier of this subscription. This identifier can be retrieved from the resource referenced by the "Location" HTTP header in the response to a POST request creating a new subscription resource. It can also be retrieved from the "id" attribute in the payload body of that response.	string

HTTP Code	Description	Schema
200	OK Representation of the subscription resource. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	•
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401

HTTP Code	Description	Schema
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416

HTTP Code	Description	Schema
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

Name	Description	Schema
_links required	Links to resources related to this resource.	_links
callbackUri required	String formatted according to IETF RFC 3986.	string
filter optional	This type represents a subscription filter related to notifications related to VNF package management. At a particular nesting level in the filter structure, the following applies: All attributes shall match in order for the filter to match (logical "and" between different filter attributes). If an attribute is an array, the attribute shall match if at least one of the values in the array matches (logical "or" between the values of one filter attribute).	niter
id required	String formatted according to IETF RFC 3986.	string

_links

Name	Description	Schema
self required	This type represents a link to a resource.	self

self

Name	Description	Schema
href required	URI of the referenced resource.	string (url)

filter

Name	Description	Schema
notificationTy pes optional	Match particular notification types. Permitted values: - VnfPackageOnboardingNotification - VnfPackageChangeNotification	11 27 10
vnfProductsFr omProviders optional	If present, match VNF packages that contain VNF products from certain providers.	<pre> vnfProductsFromPr oviders > array</pre>

vnfProductsFromProviders

Name	Description	Schema
operationalSt ate optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< enum (ENABLED, DISABLED) > array
usageState optional	Match particular usage state of the on-boarded VNF package. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< enum (IN_USE, NOT_IN_USE) > array
vnfPkgId optional	Match VNF packages with a package identifier listed in the attribute. May be present if the "notificationTypes" attribute contains the value "VnfPackageChangeNotification", and shall be absent otherwise.	< string > array

Name	Description	Schema
vnfProducts optional	If present, match VNF packages that contain VNF products with certain product names, from one particular provider.	< vnfProducts > array
vnfProvider required	Name of the VNFprovider to match.	string
vnfdId optional	Match VNF packages with a VNFD identifier listed in the attribute.	< string > array

vnfProducts

Name	Description	Schema
versions optional	If present, match VNF packages that contain VNF products with certain versions and a certain product name, from one particular provider.	
vnfProductNa me required	Name of the VNF product to match.	string

versions

Name	Description	Schema
vnfSoftwareV ersion required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	
vnfdVersions optional	If present, match VNF packages that contain VNF products with certain VNFD versions, a certain software version and a certain product name, from one particular provider.	< string > array

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)

Name	Description	Schema
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	J
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".

Terminate subscription

DELETE /subscriptions/{subscriptionId}

Description

Terminate subscription The DELETE method terminates an individual subscription.

Parameters

Туре	Name	Description	Schema
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Path	subscriptionI d required	Identifier of this subscription. This identifier can be retrieved from the resource referenced by the "Location" HTTP header in the response to a POST request creating a new subscription resource. It can also be retrieved from the "id" attribute in the payload body of that response.	string

HTTP Code	Description	Schema
204	No Content The subscription resource was deleted successfully. Headers : WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	No Content
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403

HTTP Code	Description	Schema
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".

VNF packages

POST /vnf_packages

Description

"The POST method creates a new individual VNF package resource."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Header	Content-Type required	The MIME type of the body of the request. Reference: IETF RFC 7231	string
Body	CreateVnfPkgI nfoRequest required	"IndividualVNF package resource creation parameters, as defined in clause 9.5.2.2"	CreateVnfPkgInfoRe quest

Create VnfPkgInfoRequest

Name	Description	Schema
userDefinedD ata optional	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	

HTTP Code	Description	Schema
201	"Status 201 - Created" "An individual VNF package resource has been created successfully. The response body shall contain a representation of the new individual VNF package resource, as defined in clause 9.5.2.4. The HTTP response shall include a "Location" HTTP header that contains the resource URI of the individual VNF package resource." Headers: Location (string): "The HTTP response shall include a "Location" HTTP header that contains the resource URI of the new NS descriptor resource.".	Response 201

Name	Description	Schema
checksum optional	This type represents the checksum of a VNF package or an artifact file.	checksum
id required	An identifier with the intention of being globally unique.	string
softwareImag es optional	Information about VNF package artifacts that are software images. This attribute shall not be present before the VNF package content is on-boarded. Otherwise, this attribute shall be present unless it has been requested to be excluded per attribute selector.	< softwareImages > array
vnfProductNa me optional	Name to identify the VNF product.Invariant for the VNF product lifetime. This information is copied from the VNFD. It shall be present after the VNF package content has been on-boarded and absent otherwise.	string
vnfProvider optional	Provider of the VNF package and the VNFD. This information is copied from the VNFD. It shall be present after the VNF package content has been on-boarded and absent otherwise.	string
vnfSoftwareV ersion optional	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	string
vnfdId optional	An identifier with the intention of being globally unique.	string
vnfdVersion optional	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	string

checksum

Name	Description	Schema
algorithm required	Name of the algorithm used to generate the checksum, as defined in ETSI GS NFV-SOL 004 [5]. For example, SHA-256, SHA-512.	string
hash required	The hexadecimal value of the checksum.	string

softwareImages

Name	Description	Schema
checksum required	This type represents the checksum of a VNF package or an artifact file.	checksum
containerFor mat required	Container format indicates whether the software image is in a file format that also contains metadata about the actual software. Permitted values: - AKI: a kernel image format - AMI: a machine image format - ARI: a ramdisk image format - BARE: the image does not have a container or metadata envelope - DOCKER: docker container format - OVA: OVF package in a tarfile - OVF: OVF container format	ARI, BARE, DOCKER,
createdAt required	Date-time stamp. Representation: String formatted according to IETF RFC 3339.	string (date-time)
diskFormat required	Disk format of a software image is the format of the underlying disk image. Permitted values: - AKI: a kernel image format - AMI: a machine image format - ARI: a ramdisk image format - ISO: an archive format for the data contents of an optical disc, such as CD-ROM - QCOW2: a common disk image format, which can expand dynamically and supports copy on write - RAW: an unstructured disk image format - VDI: a common disk image format - VHD: a common disk image format - VHDX: enhanced version of VHD format - VMDK: a common disk image format	ARI, ISO, QCOW2, RAW, VDI, VHD,
id required	Identifier of the software image.	string
imagePath required	Path in the VNF package, which identifies the image artifact and also allows to access a copy of the image artifact.	string
minDisk required	The minimal disk for this software image in bytes.	integer

Name	Description	Schema
minRam required	The minimal RAM for this software image in bytes.	integer
name required	Name of the software image.	string
provider required	Provider of the software image.	string
size required	Size of this software image in bytes.	integer
userMetadata optional	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	
version required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	string

checksum

Name	Description	Schema
algorithm required	Name of the algorithm used to generate the checksum, as defined in ETSI GS NFV-SOL 004 [5]. For example, SHA-256, SHA-512.	string
hash required	The hexadecimal value of the checksum.	string

VNF packages

GET /vnf_packages

Description

"The GET method queries the information of the VNF packages matching the filter. This method shall follow the provisions specified in the Tables 9.4.2.3.2-1 and 9.4.2.3.2-2 for URI query parameters, request and response data structures, and response codes."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Query	all_fields optional	"Include all complex attributes in the response. See clause 4.3.3 for details. The NFVO shall support this parameter."	string
Query	exclude_defau lt optional	"Indicates to exclude the following complex attributes from the response. See clause 4.3.3 for details. The NFVO shall support this parameter. The following attributes shall be excluded from the VnfPkgInfo structure in the response body if this parameter is provided, or none of the parameters "all_fields," "fields", "exclude_fields", "exclude_default" are provided: - softwareImages - additionalArtifacts - userDefinedData - checksum."	
Query	exclude_fields optional	"Complex attributes to be excluded from the response. See clause 4.3.3 for details. The NFVO should support this parameter."	string
Query	fields optional	"Complex attributes to be included into the response. See clause 4.3.3 for details. The NFVO should support this parameter."	string
Query	filter optional	"Attribute-based filtering parameters according to clause 4.3.2. The NFVO shall support receiving filtering parameters as part of the URI query string. The OSS/BSS may supply filtering parameters. All attribute names that appear in the VnfPkgInfo and in data types referenced from it shall be supported in attribute-based filtering parameters."	string

HTTP Code	Description	Schema
200	"Status 200"	< Response 200 > array
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403

HTTP Code	Description	Schema
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	

Name	Description	Schema
	A human-readable explanation specific to this occurrence of the problem.	string

Individual VNF package

GET /vnf_packages/{vnfPkgId}

Description

"This resource represents an individual VNF package. The client can use this resource to read information of the VNF package, update information of the VNF package, or delete a VNF package."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string

Type	Name	Description	Schema
Path	vnfPkgId required	"Identifier of the VNF package. The identifier is allocated by the NFVO".	string

HTTP Code	Description	Schema
200	"200 OK" "Information of the VNF package."	Response 200
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403

HTTP Code	Description	Schema
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	

Name	Description	Schema
checksum optional	This type represents the checksum of a VNF package or an artifact file.	checksum
id required	An identifier with the intention of being globally unique.	string
softwareImag es optional	Information about VNF package artifacts that are software images. This attribute shall not be present before the VNF package content is on-boarded. Otherwise, this attribute shall be present unless it has been requested to be excluded per attribute selector.	< softwareImages > array
vnfProductNa me optional	Name to identify the VNF product.Invariant for the VNF product lifetime. This information is copied from the VNFD. It shall be present after the VNF package content has been on-boarded and absent otherwise.	string
vnfProvider optional	Provider of the VNF package and the VNFD. This information is copied from the VNFD. It shall be present after the VNF package content has been on-boarded and absent otherwise.	string
vnfSoftwareV ersion optional	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	string
vnfdId optional	An identifier with the intention of being globally unique.	string

Name	Description	Schema
vnfdVersion optional	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	

checksum

Name	Description	Schema
algorithm required	Name of the algorithm used to generate the checksum, as defined in ETSI GS NFV-SOL 004 [5]. For example, SHA-256, SHA-512.	string
hash required	The hexadecimal value of the checksum.	string

software Images

Name	Description	Schema
checksum required	This type represents the checksum of a VNF package or an artifact file.	checksum
containerFor mat required	Container format indicates whether the software image is in a file format that also contains metadata about the actual software. Permitted values: - AKI: a kernel image format - AMI: a machine image format - ARI: a ramdisk image format - BARE: the image does not have a container or metadata envelope - DOCKER: docker container format - OVA: OVF package in a tarfile - OVF: OVF container format	ARI, BARE, DOCKER,
createdAt required	Date-time stamp. Representation: String formatted according to IETF RFC 3339.	string (date-time)
diskFormat required	Disk format of a software image is the format of the underlying disk image. Permitted values: - AKI: a kernel image format - AMI: a machine image format - ARI: a ramdisk image format - ISO: an archive format for the data contents of an optical disc, such as CD-ROM - QCOW2: a common disk image format, which can expand dynamically and supports copy on write - RAW: an unstructured disk image format - VDI: a common disk image format - VHD: a common disk image format - VHDX: enhanced version of VHD format - VMDK: a common disk image format	ARI, ISO, QCOW2, RAW, VDI, VHD,

Name	Description	Schema
id required	Identifier of the software image.	string
imagePath required	Path in the VNF package, which identifies the image artifact and also allows to access a copy of the image artifact.	string
minDisk required	The minimal disk for this software image in bytes.	integer
minRam required	The minimal RAM for this software image in bytes.	integer
name required	Name of the software image.	string
provider required	Provider of the software image.	string
size required	Size of this software image in bytes.	integer
userMetadata optional	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	
version required	Software version of the VNF. This is changed when there is any change to the software included in the VNF package. This information is copied from the VNFD. It shall be present after the VNF package content has been onboarded and absent otherwise.	string

checksum

Name	Description	Schema
algorithm required	Name of the algorithm used to generate the checksum, as defined in ETSI GS NFV-SOL 004 [5]. For example, SHA-256, SHA-512.	string
hash required	The hexadecimal value of the checksum.	string

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string

Individual VNF package

DELETE /vnf_packages/{vnfPkgId}

Description

"The DELETE method deletes an individual NS descriptor resource.

Parameters

Type	Name	Description	Schema
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Path	vnfPkgId required	"Identifier of the VNF package. The identifier is allocated by the NFVO".	string

HTTP Code	Description	Schema
204	"204 No Content" "The operation has completed successfully. The response body shall be empty."	object
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403

HTTP Code	Description	Schema
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Conflict Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to any of the following scenarios: - Disable a VNF package resource of hich the operational state is not ENABLED - Enable a VNF package resource of which the operational state is not DISABLED The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 409
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416

HTTP Code	Description	Schema
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

Individual VNF package

PATCH /vnf_packages/{vnfPkgId}

Description

"The PATCH method updates the information of a VNF package." "This method shall follow the provisions specified in the Tables 9.4.3.3.4-1 and 9.4.3.3.4-2 for URI query parameters, request and response data structures, and response codes."

Parameters

Туре	Name	Description	Schema
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Header	Content-Type required	The MIME type of the body of the request. Reference: IETF RFC 7231	string
Path	vnfPkgId required	"Identifier of the VNF package. The identifier is allocated by the NFVO".	string
Body	VnfPkgInfoMo difications required		VnfPkgInfoModificat ions

VnfPkgInfoModifications

NsdInfoModifi cations This type represents modifications to the information of a VNF package. It shall comply with the provisions defined in Table 9.5.2.3-1.	cation

NsdInfoModifications

Name	Description	Schema
operationalSt ate optional	"The enumeration PackageOperationalStateType shall comply with the provisions defined in Table 9.5.4.4-1." Acceptable values are: -ENABLED - The VNF package is enabled, i.e. it can be used for instantiation of new VNF instancesDISABLED - The VNF package is disabled, i.e. it cannot be used for further VNF instantiation requests (unless and until the VNF package is re-enabled).	enum (ENABLED, DISABLED)
userDefinedD ata optional	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	

HTTP Code	Description	Schema
200	"200 OK." "The operation was completed successfully. The response body shall contain attribute modifications for an "Individual VNF package" resource." Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 200
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401

HTTP Code	Description	Schema
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Conflict Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to any of the following scenarios: - Disable a VNF package resource of hich the operational state is not ENABLED - Enable a VNF package resource of which the operational state is not DISABLED The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 409

HTTP Code	Description	Schema
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

IndividualVNF package artifact.

GET /vnf_packages/{vnfPkgId}/artifacts/{artifactPath}

Parameters

Type	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response.	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Header	Range optional	The request may contain a "Range" HTTP header to obtain single range of bytes from the VNF package file. This can be used to continue an aborted transmission. If the NFVO does not support range requests, it should return the whole file with a 200 OK response instead.	
Path	artifactPath required	This resource represents an individual artifact contained in a VNF package. The client can use this resource to fetch the content of the artifact.	

Туре	Name	Description	Schema
Path	vnfPkgId required	Identifier of the on-boarded VNF package. The identifier is allocated by the NFVO. This identifier can be retrieved from the "vnfPkgId" attribute in the VnfPackageOnboardingNotification or VnfPackageChangeNotification.	string

HTTP Code	Description	Schema
200	200 OK. On success, the content of the artifact is returned. The payload body shall contain a copy of the artifact file from the VNF package, as defined by ETSI GS NFV-SOL 004. The "Content-Type" HTTP header shall be set according to the content type of the artifact file. If the content type cannot be determined, the header shall be set to the value "application/octet-stream". Headers: WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	No Content
206	Partial Content. On success, if the NFVO supports range requests, a single consecutive byte range from the content of the VNF package file is returned. The response body shall contain the requested part of the VNF package file. The "Content-Range" HTTP header shall be provided according to IETF RFC 7233. The "Content-Type" HTTP header shall be set as defined above for the "200 OK" response. Headers: WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	No Content

HTTP Code	Description	Schema
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	

HTTP Code	Description	Schema
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Conflict Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to any of the following scenarios: - Disable a VNF package resource of hich the operational state is not ENABLED - Enable a VNF package resource of which the operational state is not DISABLED The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".

VNF package content

GET /vnf_packages/{vnfPkgId}/package_content

Description

"The GET method fetches the content of a VNF package identified by the VNF package identifier allocated by the NFVO."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response.	enum (text/plain, application/zip)
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string

Туре	Name	Description	Schema
Header	Range optional	The request may contain a "Range" HTTP header to obtain single ange of bytes from the VNF package file. This can be used to ontinue an aborted transmission. If the NFVO does not support range requests, it should return the whole file with a 200 OK response instead.	ctring
Path	vnfPkgId required		string

HTTP Code	Description	Schema
200	OK On success, a copy of the VNF package file is returned. The response body shall include a copy of the VNF package file. The "Content-Type" HTTP header shall be set according to the type of the file, i.e. to "application/zip" for a VNF Package as defined in ETSI GS NFV-SOL 004 [5]. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	No Content
206	Partial Content On success, if the NFVO supports range requests, a single consecutive byte range from the content of the NSD file is returned. The response body shall contain the requested part of the NSD file. The "Content-Range" HTTP header shall be provided according to IETF RFC 7233 [23]. The "Content-Type" HTTP header shall be set as defined above for the "200 OK" response. Headers: Content-Range (string) Content-Type (string)	

HTTP Code	Description	Schema
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404

HTTP Code	Description	Schema
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Conflict Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to the fact that "onboardingState" of the VNF package has a value different from "ONBOARDED". The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 409
416	The byte range passed in the "Range" header did not match any available byte range in the VNF package file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

VNF package content.

PUT /vnf_packages/{vnfPkgId}/package_content

Description

"The PUT method uploads the content of a VNF package."

Parameters

Туре	Name	Description	Schema
Path	vnfPkgId required		string
FormDat a	file optional	The payload body contains a ZIP file that represents the VNF package. The "Content-Type" HTTP header shall be set according to the type of the file, i.e. to "application/zip" for a VNF Package as defined in ETSI GS NFV-SOL 004 [5].	file

HTTP Code	Description	Schema
202	"202 Accepted" "The VNF package was accepted for uploading, but the processing has not been completed. It is expected to take some time for processing. The response body shall be empty. See note."	No Content
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403

HTTP Code	Description	Schema
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Conflict Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to the fact that the onboarding state of the VNF package resource is not CREATED . The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 409
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500

HTTP Code	Description	Schema
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	Response 503

Upload VNF package from URI task.

Description

"This task resource represents the "Upload VNF package from URI" operation. The client can use this resource to request the uploading of a VNF package by providing address information to the NFVO for retrieving the content of the VNF package. The POST method provides the information for the NFVO to get the content of a VNF package."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response. Reference: IETF RFC 7231	string
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Header	Content-Type required	The MIME type of the body of the request. Reference: IETF RFC 7231	string
Path	vnfPkgId required		string
Body	UploadVnfPkg FromUriRequ est required	"The payload body contains the address information based on which the NFVO can obtain the content of the VNF package."	UploadVnfPkgFrom UriRequest

Upload VnfPkgFrom UriRequest

Name	Description	Schema
userDefinedD ata optional	This type represents a list of key-value pairs. The order of the pairs in the list is not significant. In JSON, a set of key-value pairs is represented as an object. It shall comply with the provisions defined in clause 4 of IETF RFC 7159.	.1

HTTP Code	Description	Schema
202	"Accepted" "The information about the VNF package was received successfully, but the on-boarding has not been completed. It is expected to take some time for processing. The response body shall be empty."	No Content
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	

Name	Description	Schema
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)

VNFD of an individual VNF package

GET /vnf_packages/{vnfPkgId}/vnfd

Description

"The GET method reads the content of the VNFD within a VNF package." "The VNFD can be implemented as a single file or as a collection of multiple files. If the VNFD is implemented in the form of multiple files, a ZIP file embedding these files shall be returned. If the VNFD is implemented as a single file, either that file or a ZIP file embedding that file shall be returned. The selection of the format is controlled by the "Accept" HTTP header passed in the GET request. • If the "Accept" header contains only "text/plain" and the VNFD is implemented as a single file, the file shall be returned; otherwise, an error message shall be returned. • If the "Accept" header contains only "application/zip", the single file or the multiple files that make up the VNFD shall be returned embedded in a ZIP file. • If the "Accept" header contains both "text/plain" and "application/zip", it is up to the NFVO to choose the format to return for a single-file VNFD; for a multi-file VNFD, a ZIP file shall be returned. The default format of the ZIP file shall be the one specified in ETSI GS NFV-SOL 004 [5] where only the YAML files representing the VNFD, and information necessary to navigate the ZIP file and to identify the file that is the entry point for parsing the VNFD (such as TOSCA-meta or manifest files or naming conventions) are included. This method shall follow the provisions specified in the Tables 9.4.4.3.2-1 and 9.4.4.3.2-2 for URI guery parameters, request and response data structures, and response codes."

Parameters

Туре	Name	Description	Schema
Header	Accept required	Content-Types that are acceptable for the response.	enum (text/plain, application/zip)
Header	Authorization optional	The authorization token for the request. Reference: IETF RFC 7235	string
Path	vnfPkgId required	"Identifier of the on-boarded VNF package. The identifier is allocated by the NFVO."	string

HTTP Code	Description	Schema
200	OK On success, the content of the VNFD is returned. The payload body shall contain a copy of the file representing the VNFD or a ZIP file that contains the file or multiple files representing the VNFD, as specified above. The "Content-Type" HTTP header shall be set according to the format of the returned file, i.e. to "text/plain" for a YAML file or to "application/zip" for a ZIP file. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	
400	Bad Request. Error: Invalid attribute-based filtering parameters. The response body shall contain a ProblemDetails structure, in which the "detail" attribute should convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 400
401	Unauthorized If the request contains no access token even though one is required, or if the request contains an authorization token that is invalid (e.g. expired or revoked), the API producer should respond with this response. The details of the error shall be returned in the WWW-Authenticate HTTP header, as defined in IETF RFC 6750 and IETF RFC 7235. The ProblemDetails structure may be provided. Headers: Content-Type (string): The MIME type of the body of the response. WWW-Authenticate (string): Challenge if the corresponding HTTP request has not provided authorization, or error details if the corresponding HTTP request has provided an invalid authorization token.	Response 401

HTTP Code	Description	Schema
403	Forbidden If the API consumer is not allowed to perform a particular request to a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure shall be provided. It should include in the "detail" attribute information about the source of the problem, and may indicate how to solve it. Headers: Content-Type (string): The MIME type of the body of the response.	Response 403
404	Not Found If the API producer did not find a current representation for the resource addressed by the URI passed in the request, or is not willing to disclose that one exists, it shall respond with this response code. The "ProblemDetails" structure may be provided, including in the "detail" attribute information about the source of the problem, e.g. a wrong resource URI variable. Headers: Content-Type (string): The MIME type of the body of the response.	Response 404
405	Method Not Allowed If a particular HTTP method is not supported for a particular resource, the API producer shall respond with this response code. The "ProblemDetails" structure may be omitted in that case. Headers: Content-Type (string): The MIME type of the body of the response.	Response 405
406	If the "Accept" header does not contain at least one name of a content type for which the NFVO can provide a representation of the VNFD, the NFVO shall respond with this response code. Headers: Content-Type (string): The MIME type of the body of the response.	Response 406
409	Error: The operation cannot be executed currently, due to a conflict with the state of the resource. Typically, this is due to the fact that "onboardingState" of the VNF package has a value different from "ONBOARDED". The response body shall contain a ProblemDetails structure, in which the "detail" attribute shall convey more information about the error. Headers: Content-Type (string): The MIME type of the body of the response.	Response 409

HTTP Code	Description	Schema
416	The byte range passed in the "Range" header did not match any available byte range in the NSD file (e.g. "access after end of file"). The response body may contain a ProblemDetails structure. Headers: Content-Type (string): The MIME type of the body of the response.	Response 416
500	Internal Server Error If there is an application error not related to the client's input that cannot be easily mapped to any other HTTP response code ("catch all error"), the API producer shall respond withthis response code. The ProblemDetails structure shall be provided, and shall include in the "detail" attribute more information about the source of the problem. Headers: Content-Type (string): The MIME type of the body of the response.	Response 500
503	Service Unavailable If the API producer encounters an internal overload situation of itself or of a system it relies on, it should respond with this response code, following the provisions in IETF RFC 7231 [13] for the use of the Retry-After HTTP header and for the alternative to refuse the connection. The "ProblemDetails" structure may be omitted. Headers: Content-Type (string): The MIME type of the body of the response.	

Name	Description	Schema
detail required	A human-readable explanation specific to this occurrence of the problem.	string
instance optional	A URI reference that identifies the specific occurrence of the problem. It may yield further information if dereferenced.	string (URI)
status required	The HTTP status code for this occurrence of the problem. The HTTP status code ([RFC7231], Section 6) generated by the origin server for this occurrence of the problem.	integer

Name	Description	Schema
title optional	A short, human-readable summary of the problem type. It should not change from occurrence to occurrence of the problem, except for purposes of localization. If type is given and other than "about:blank", this attribute shall also be provided. A short, human-readable summary of the problem type. It SHOULD NOT change from occurrence to occurrence of the problem, except for purposes of localization (e.g., using proactive content negotiation; see [RFC7231], Section 3.4).	string
type optional	A URI reference according to IETF RFC 3986 [5] that identifies the problem type. It is encouraged that the URI provides human-readable documentation for the problem (e.g. using HTML) when dereferenced. When this member is not present, its value is assumed to be "about:blank".	string (URI)
